

What AI systems can understand about Teché Health Services

- Prepared for Tamon at Teché Health Services
- Prepared by The GEO-Pulse team — Montréal, Québec
- techehealthservices.com · 2026-08-09
- Inside: observed gaps, prioritized fixes, owners, and a way to verify the work.

What this audit gives you

- A plain-English view of what was tested.
- The website gaps most likely to block accurate reuse.
- Specific actions your web and content teams can take.
- A repeatable monthly comparison so fixes are verified, not assumed.

OBSERVED READINESS

74/100 · Grade C

- 2 passed · 1 warnings · 2 failed · 0 not tested
- 54 pages were included in the canonical audit.
- This score describes tested website signals; it does not predict rankings or citations.

The highest-priority fixes

- Canonical URL declaration — Add a self-referencing canonical URL to each indexable page.
- Direct question-answer structure — Add concise question-led sections to priority service pages.
- Structured data (JSON-LD) validity — Add valid Organization and Service schema where supported by page content.

Can buyers get a direct answer?

- <https://techehealthservices.com/practice-areas/it-services/> — needs clearer question-led answers
- <https://techehealthservices.com/practice-areas/ehr-implementation/> — needs clearer question-led answers
- <https://techehealthservices.com/services/qa-service-1/> — needs clearer question-led answers
- <https://techehealthservices.com/services/qa-service-2/> — needs clearer question-led answers

Fix once, then apply consistently

- Canonical URL declaration — check every affected template, not only the home page.
- Direct question-answer structure — check every affected template, not only the home page.
- Structured data (JSON-LD) validity — check every affected template, not only the home page.

Every action needs an owner and proof

- Web developer: Add a self-referencing canonical URL to each indexable page. Verify with a fresh scan.
- Content team: Add concise question-led sections to priority service pages. Verify with a fresh scan.
- Content team: Add valid Organization and Service schema where supported by page content. Verify with a fresh scan.

What machines can retrieve and interpret

- AI retrieval agent access [PASS]: tested retrieval agents were allowed.
- Structured data coverage [WARNING]: incomplete on tested service pages.
- Access checks and content-quality checks are reported separately; one does not prove the other.

See what changed after the work ships

- Baseline the first run.
- Classify each later finding as new, resolved, regressed, unchanged, or not comparable.
- Keep the full audit each month, plus a concise change summary.
- Run an on-demand verification scan after important fixes.

YOUR FULL AUDIT IS READY
