AI SEARCH READINESS REPORT

Tamon

techehealthservices.com **74** / 100

Generated 2026-08-09, 12:00 UTC

The GEO-Pulse team
Montréal, Québec

Grade C

Observed website signals
Prioritized fixes with owners
Fresh-scan verification

This report reflects technical signals relevant to AI search readiness.

For the Owner - What This Means

Your site scored 74/100 (C). AI engines can reach you, but 2 checks below make the site harder for them to understand and reuse accurately. The quick wins below are the fastest path up.

Currently working against you:

- Direct question-answer structure - The tested pages do not consistently answer buyer questions directly.
- Canonical URL declaration - No canonical link was detected on the tested page.

Your three quick wins:

1. Canonical URL declaration - WordPress admin | 10-20 minutes | Do it yourself

- Add a self-referencing canonical URL to each indexable page.
- Verify: View page source: <link rel="canonical"> should match the page's own URL.

Why this matters: the understanding gaps below can make the site harder for machines to interpret and reuse accurately. This audit reports observable readiness signals; it does not predict rankings or citations.

Executive Summary

Your site scored 74/100 (C). The site is in workable shape, but several issues still weaken how clearly machines can interpret it. 2 of 5 checks passed. The most urgent issue is Direct question-answer structure. Start with Add concise question-led sections to priority service pages.

Top priorities:

01.

[Medium]

Direct question-answer structure

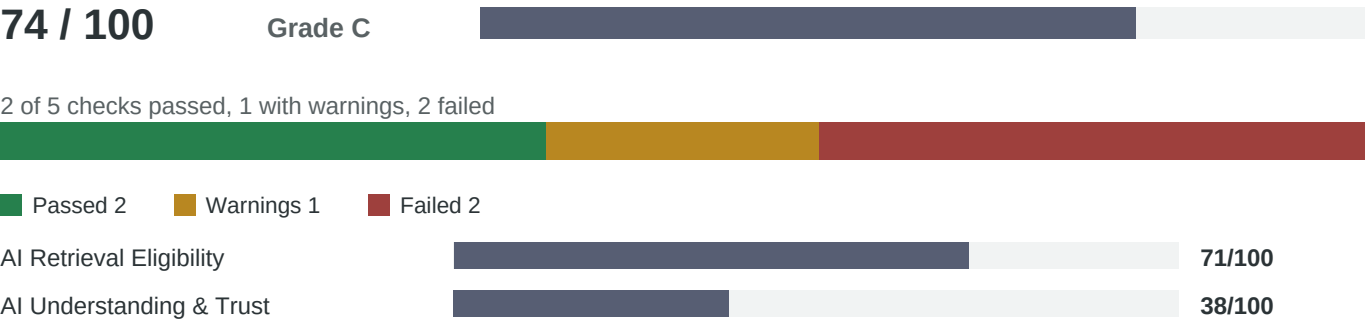

The tested pages do not consistently answer buyer questions directly.
02.

[Medium]

Canonical URL declaration

No canonical link was detected on the tested page.

At a Glance

Top blocker: Direct question-answer structure - owner: Marketing/content person
First recommended move: Add concise question-led sections to priority service pages.

Category Breakdown

AI Readiness

Not measured

Extractability (2 checks)

68 / 100 - D+

Trust (1 checks)

63 / 100 - D

Priority Action Plan

01 Direct question-answer structure

[Medium]

Owner: Marketing/content person

Why it matters: The tested pages do not consistently answer buyer questions directly.

02 Canonical URL declaration

[Medium]

Owner: WordPress admin

Why it matters: No canonical link was detected on the tested page.

03 Structured data (JSON-LD) validity

[Low]

Owner: WordPress admin

Why it matters: Structured data coverage is incomplete on tested service pages.

First move: Add valid Organization and Service schema where supported by page content.

Eligible is not the same as indexed

Everything above measures whether your site is ELIGIBLE for AI search. Whether pages are actually IN the indexes only Google and Bing can confirm - a 10-minute check anyone in your team can do with a free account.

Google (Search + AI Overviews) - Google Search Console (free)

1. Go to search.google.com/search-console and add your site (choose Domain property; your hosting or IT person can add the DNS record it asks for).
2. Paste your homepage URL into the URL Inspection bar at the top.
3. Read the verdict: "URL is on Google" = indexed. "URL is not on Google" = not indexed - click "Request indexing".
4. Repeat for your 3-5 most important service pages.
5. While there, open Settings and confirm any "Search generative AI" control is not set to opt out.

Bing / Copilot / ChatGPT-local - Bing Webmaster Tools (free)

1. Go to bing.com/webmasters and sign in - you can import your verified site straight from Google Search Console in two clicks.
2. Use URL Inspection on the same pages.
3. If pages are missing, submit your sitemap under Sitemaps. ChatGPT leans on the Bing index for local queries, so this directly affects AI visibility.

A quick "site:yourdomain.com" search in Google or Bing gives a rough sanity check, but the console verdicts above are the authoritative answer.

Buyer-Question Coverage

Prospects ask AI engines four kinds of questions. This is whether your site gives engines anything to answer with.

Service coverage: COVERED

Service pages or explicit service language found.

Location coverage: GAP

No location or service-area coverage was detected in the crawl, leaving no direct site evidence for location-specific answers.

Do: A service-area page per city you serve, with LocalBusiness schema naming the area.

Comparison coverage: GAP

No comparison or "how to choose" content was detected in the crawl.

Do: Publish honest comparison content: "X vs Y", "how to choose an MSP", "best options for ..." including competitors.

Proof coverage: GAP

No case studies, testimonials, or named results were detected in the crawl.

Do: Publish 2-3 named case studies with real numbers, and a testimonials page.

This is coverage your site controls, measured from the crawl - not live citation share. For a per-engine citation benchmark against named competitors, run the GEO-Pulse citation benchmark; it samples real buyer questions across engines with a transparent question list.

Beyond your website - where AI engines actually look you up

AI assistants may reuse information from your website, business profiles, and relevant third-party directories. Keep those sources complete and consistent, then verify changes with fresh tests because source selection varies by engine, query, location, and time.

Yelp + BBB profiles [helps: ChatGPT]

Owner: You

Claim and complete your Yelp and Better Business Bureau profiles: exact business name, address, phone, services, hours, photos.

Relevant third-party profiles give search and answer systems another source for confirming business identity and service details.

Bing Places for Business [helps: ChatGPT, Copilot]

Owner: You

Claim your Bing Places listing (you can import it from Google Business Profile in minutes) and keep it current.

A current Bing listing can improve the business information available to Bing-powered search surfaces.

Google Business Profile [helps: Google AI Overviews, Gemini]

Owner: Google Business Profile manager

Complete every GBP field: categories, services, service area, hours, photos, Q&A. Post updates monthly.

Google Business Profile supplies business information to Google's local surfaces. Treat it as a Google lever, not proof of visibility in other assistants.

Your own site + LocalBusiness schema [helps: Gemini]

Owner: WordPress admin

Keep the site's LocalBusiness JSON-LD complete (name, address, phone, areaServed) and build a landing page per service area.

Clear first-party pages and valid schema help systems interpret the business, services, and service area. They do not guarantee selection or citation.

Apple Business Connect [helps: Siri, Apple Maps]

Owner: You

Claim your free Apple Business Connect listing with matching NAP details.

Feeds Apple Maps and Siri answers, and is one more consistent identity anchor for every engine that cross-checks entities.

Niche + review platforms (G2, Capterra, Trustpilot, vertical directories) [helps: Perplexity, ChatGPT]

Owner: Marketing/content person

List the business on the directories your industry actually uses (for an MSP: Cloudtango, UpCity, Clutch, local chamber listings).

Relevant vertical profiles can provide independent context about the business. Prioritize directories real buyers use instead of listing everywhere.

NAP consistency sweep [helps: All engines]

Owner: Marketing/content person

Make the business Name, Address, and Phone IDENTICAL everywhere - site footer, schema, GBP, Yelp, BBB, Bing, Apple, directories. Fix old addresses and tracking numbers.

Consistent identity details reduce ambiguity when people and automated systems compare sources.

Review depth and velocity [helps: All engines]

Owner: You

Ask every happy customer for a review on the credible platform their buyers already use. Respond to every review, good or bad.

Authentic reviews give prospective buyers useful context and may be available to search surfaces that index the review platform.

Review guidance is directional - engines do not publish thresholds, and buying or faking reviews risks platform bans and poisoned AI summaries. Steady, real reviews beat bursts.

Question-Answer Readiness

This section summarizes whether key pages are currently shaped to answer likely buyer questions clearly enough for machine retrieval and reuse.

Direct question-answer structure [FAIL]

The tested pages do not consistently answer buyer questions directly.

First move: Add concise question-led sections to priority service pages.

Coverage Summary

Seed URL: <https://techehealthservices.com/>

URLs planned: 4

Pages fetched: 4

Pages errored: 0

robots.txt status: 200

Repeated Page Patterns

Direct question-answer structure appears on 52 pages.

The tested pages do not consistently answer buyer questions directly.

Sample pages: <https://techehealthservices.com/services/qa-service-1/>,

<https://techehealthservices.com/services/qa-service-2/>, <https://techehealthservices.com/services/qa-service-3/>

[PASS] AI retrieval agent access (robots.txt)

Detailed Check Reference

Check	Status	Weight	Finding
AI retrieval agent access (robots.txt)	PASS	12	The tested retrieval agents were allowed by robots.txt.

Canonical URL declaration	FAIL	5	No canonical link was detected on the tested page.
Direct question-answer structure	FAIL	6	The tested pages do not consistently answer buyer questions directly.
Structured data (JSON-LD) validity	WARNING	4	Structured data coverage is incomplete on tested service pages.
Page title	PASS	3	A descriptive page title was found.

Delegation Appendix - Hand These Pages to Whoever Does the Work

Each item below is self-contained: forward it as-is to the named role. No engineering team required.

Canonical URL declaration [Quick Win]

Owner: WordPress admin | Effort: 10-20 minutes | DIY-friendly

Affected URLs: <https://techehealthservices.com/>

Current: No canonical link was detected on the tested page.

Desired: Each page's canonical URL points to itself (or the one true version of the page).

Where: WordPress SEO plugin - Edit page -> SEO plugin box -> Advanced -> Canonical URL

Copy-paste instruction: "Our page is missing a self-referencing canonical URL or points at the wrong URL. In the SEO plugin's Advanced settings, clear an incorrect Canonical URL field (so the plugin can default to the page itself) or set it to the correct <https://> URL."

Verify: View page source: <link rel="canonical"> should match the page's own URL.

Risk/rollback: Reversible per page; no side effects when set to the page itself.

Direct question-answer structure [Big Project]

Owner: Marketing/content person | Effort: 2-4 hours per page | DIY-friendly

Affected URLs: <https://techehealthservices.com/practice-areas/it-services/>,

<https://techehealthservices.com/practice-areas/ehr-implementation/>,

<https://techehealthservices.com/services/qa-service-1/> (+49 more)

Current: The tested pages do not consistently answer buyer questions directly.

Desired: Key pages answer the customer's question in the first 30% of the page (answer-first, then detail).

Where: WordPress editor - Edit page -> restructure so the direct answer appears in the first third

Copy-paste instruction: "Please restructure our key pages answer-first: open with a 2-3 sentence direct answer to what the visitor came for (what we do, for whom, at what price range), then place the supporting detail below."

Verify: Read the first screen of the page - does it answer the core question without scrolling? Re-run the scan.

Risk/rollback: WordPress revisions let you restore the old layout.

Structured data (JSON-LD) validity [Quick Win]

Owner: WordPress admin | Effort: 30-60 minutes | DIY-friendly

Affected URLs: <https://techehealthservices.com/>

Current: Structured data coverage is incomplete on tested service pages.

Desired: Valid JSON-LD (LocalBusiness or Organization with name + address) whose values match what the page visibly says.

Where: WordPress SEO plugin (Yoast/Rank Math schema settings) or a schema plugin - SEO plugin -> Search Appearance / Schema -> set Organization or LocalBusiness with name, logo, address

Copy-paste instruction: "Please add structured data to our site: LocalBusiness schema with our exact business name, address, and phone (matching the site footer), plus FAQPage schema on pages that answer common questions. Yoast or Rank Math can do this without code."

Verify: Paste the page URL into validator.schema.org (or Google's Rich Results Test) - it should show LocalBusiness/Organization with no errors.

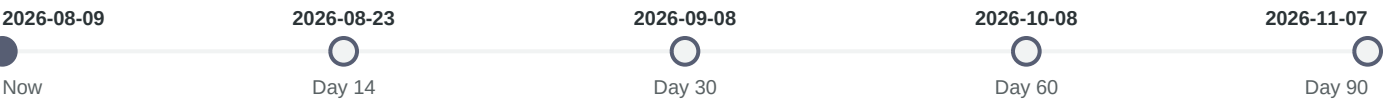

Risk/rollback: Schema is additive markup; removing the plugin setting restores the previous state.

Technical Appendix

Robots / AI crawler access: AI retrieval agent access [PASS]: tested retrieval agents were allowed.
Schema findings: Structured data coverage [WARNING]: incomplete on tested service pages.
Coverage payload:
{\"seed_url\":\"https://techealthservices.com/\", \"urls_planned\":4, \"pages_fetched\":4, \"pages_errored\":0, \"robots_status\":200}

Your Next 90 Days

Work the plan in order - access first, then profiles and content, then measure against this report as your baseline.

2026-08-09 - Now - fix the highest-priority findings

- Assign the highest-priority fixes above to the named owners.
- Keep this report as the baseline for the next verification scan.

2026-08-23 - Day 14 - verify the first fixes

- Re-run the scan and verify the completed checks against this baseline.
- Keep unresolved findings assigned; do not mark them fixed without fresh evidence.

2026-09-08 - Day 30 - profiles, schema, and key pages

- Complete business profiles (Google Business Profile, Bing Places) and directory listings.
- Ship LocalBusiness/FAQPage schema and restructure your top service pages answer-first.

2026-10-08 - Day 60 - buyer-question content

- Publish pages that answer the questions buyers actually ask (pricing, comparisons, "best X in Y").
- Add real proof: case studies, certifications, named team members.

2026-11-07 - Day 90 - measure against this baseline

- Re-run the scan and compare with today's report as the baseline.
- Ask ChatGPT, Claude, and Perplexity your top 5 buyer questions and note whether you are cited.

Re-scan hook: run a fresh scan at getgeopulse.com - the report compares best against this baseline.

This score reflects technical signals relevant to AI search readiness - not a prediction of rankings or citations.
